User Manual for Weather App :

Overview:

The Weather App provides real-time weather updates, forecasts, and additional environmental data to users based on their entered city name.

Features:

1. City Search:

• Users can enter the name of any city in the input box.

• The app fetches and displays the weather information for that city.

2. Current Weather:

• Shows current temperature, weather condition (e.g., sunny, cloudy), and sky icon.

• Example: "23°C, Sunny".

3. Hourly Forecast:

• A horizontal scrollable section showing temperature and weather icon for the next few hours.

• Includes time and sky condition.

4. Additional Info Section:

• Displays humidity (%), wind speed (m/s), and atmospheric pressure (hPa).

5. Refresh Button:

• Allows users to reload current data manually.
